

Front End Developer / Quality Assurance (m/f/d)

Lynck Solution GmbH, based in Berlin Steglitz, supports companies in accepting payments with the most common payment methods - both in eCommerce and directly at the point of sale. By using new technologies and innovative strategies, we enable our customers to tailor risk and payments across all relevant channels and offer an advanced holistic service at fair conditions. This is made possible by our sophisticated processing platform with special fraud prevention methods, a unique range of solvency check products and our professional, service-oriented staff. Together with Creditreform Group, the leading provider of business information, marketing data and solutions in receivables management in Germany, we offer their payment solution CrefoPay.

What we offer

- A full-time position as Front End Developer / Quality Assurance .
- A motivated international team living a professional yet open company culture.
- A working environment with flexible processes and a high personal responsibility.
- A chance to play an active role in further shaping of our processes and a successful company.
- The possibility to realize your ideas, your abilities, and to take responsibility.
- Flexible working in the mobile office – you are welcome in our Berlin office at any time, but you decide how often.

Job Summary

- You are responsible for development, quality assurance and documentation of high-quality Front End Components.
- You not only work in our core product, you will also work with plugins and modules in different languages and frameworks to integrate the plugin into existing shop systems.
- You review source code for cleanliness, quality, and security.
- You report, debug, and fix issues in the product.
- You implement automatic unit, acceptance, and performance tests.
- You support the Operations team by providing advice and deployment instructions.
- You advise other business units (especially Product Management) on product evolution and feasibility on a technical level.
- You continuously educate yourself as well as your colleagues to acquire new skills.
- You research new cutting-edge development and testing technologies and evaluate fitness for day-to-day use.

What you provide

- Experience in Software Development, especially Front End development.
- Strong knowledge of QA processes and methodologies.
- Good Knowledge in JavaScript, Ember.js, PHP, GWT and general web development.
- Experience with Maven, MySQL, MongoDB, Elasticsearch and Redis.
- Proficiency in object-oriented design, clean code, design patterns, algorithmic, and data structures.
- You have a sound understanding of concurrency and cryptography.
- The ability to communicate in English (verbal and written).
- Passion and motivation around software development, quality, and you have a good sense of responsibility and ownership.

Your entry
